Dumbbell

Our wish to bring design in everyday life, where living, relax and exercise may share the same room, through design objects which are at the same time fitness tools and unique and exclusive decoration objects, has brought us to imagine and create the first line extension of Ciclotte, which has been introduced to the market during the main design events and exhibitions around the world.

Besides an update of the Ciclotte Bike, which featured an improved ergonomics thanks to the introduction of a new transmission and seat setting system which made Ciclotte Bike comfortable also for users with an height starting from 1.55 m, the big news presented is a set of modular weights: the Dumbbell.

The set of Dumbbell is characterized by an innovative conic hooking system able to quickly and easily vary the weight used by the users from 1.5 kg up to 6 kg. This allows users to undergo real training section up and heavy exercises with design weights for the first time.

The Dumbbell shares with Ciclotte Bike both the iconic round shape which directly refers to the “circle of life”, guaranteeing in this way a better distribution of the weight around the hands during the exercise, and first of all the possibility to be used as a normal fitness tool and then showcased on its special support even in a living room like a sculpture.
